FOR CONTENT CREATORS · FREE PROMPT PACK

15 Fable 5 Prompts: 30 Days of Content in One Sitting.

Hooks, calendars, repurposing rules, newsletters, lead magnets — 15 copy-paste master prompts that turn one working session into a 30-day publishing queue. Each one produces a **reusable system**, not a one-off answer.

FABLE 5 FREE WINDOW CLOSES JULY 19

Fable 5 is included in paid Claude plans until July 19, 2026, 11:59pm PT — after that it moves to usage credits. Run these while it's included.

HOOKS · CALENDAR · REPURPOSING · NEWSLETTER

By Waseem Nasir · SkynetLabs · @skynetlabs

Three steps. That's it.

No plugins, no setup. If you have a paid Claude plan, you already have everything you need.

1

Open Claude and pick Fable 5

Go to `claude.ai` (or Claude Code in your terminal) and select **Fable 5** from the model picker. It's included in every paid plan until July 19, 2026 — up to 50% of your weekly usage.

2

Paste a prompt, fill the brackets

Copy any prompt from this pack and replace everything in `[BRACKETS]` with your real details — your actual wins, your real posting capacity, transcripts of things you've already made. The more real material you paste, the better the output. Fable 5 handles huge context, so don't hold back.

3

Save the output as a system

Every prompt here returns something reusable — a rules engine, a template, a ritual. Save it. When a prompt earns its keep twice, ask Claude: `"Convert what we just did into a reusable skill"` — and it's yours on any model, forever.

> **Why these work:** each prompt follows the same skeleton — role, goal, real context, hard constraints, exact output format. Fable 5 plans backward from goals; these prompts hand it the goal and get out of the way. The through-line of this pack: one sitting produces the 30-day queue AND the rules to regenerate it next month without starting over.

01 The 30-Day Content Engine

WHEN TO USE — first. This is the one sitting that produces the queue everything else sharpens.

```
You are a social content systems designer for creators who
publish across short-form, social, and email. GOAL: Build my
content engine: pillar topics, per-platform formats, a full 30-day
queue, and the repurposing rules that turn one asset into a week
of posts — plus scheduler-ready output. CONTEXT: Who I am and what
I make: [NICHE + WHAT YOU SELL OR GROW].
Platforms:
[TIKTOK / REELS / SHORTS / X / LINKEDIN / NEWSLETTER]. My proof bank:
[REAL WINS, PROJECTS, NUMBERS I CAN SHOW].
Honest posting capacity: [X POSTS/WEEK].
Scheduler: [TOOL OR MANUAL]. CONSTRAINTS:
Every post maps to a job — authority, trust, sell, engage. No
invented metrics or fake claims; proof posts use only the pasted
material. Formats native per platform, never cross-posted copies.
No idea may require footage or assets I don't have. PROCESS:
Define pillars from the proof bank, build the repurposing map,
generate the 30-day queue, format for my scheduler. OUTPUT FORMAT:
Pillar doc, repurposing rules, 30-day table (date, platform, hook,
format, job), scheduler-ready rows.
```

PRO TIP — the repurposing map is the permanent asset. The queue expires in 30 days; the rules regenerate it forever.

02 The Calendar Rules Engine

WHEN TO USE — right after Prompt 01, so next month's queue takes minutes instead of a sitting.

```
You are a content strategist who builds calendars creators
actually follow. GOAL: Generate my 30-day content calendar AND the
rules engine behind it, so I can regenerate every future month
myself in one short session. CONTEXT: Platforms:
[LIST]. Posting capacity per week, honest:
[X]. My proof/stories bank:
[PASTE REAL WINS, PROJECTS, LESSONS]. Top 3
things I sell or want to grow: [LIST].
CONSTRAINTS: Every post maps to one of 4 jobs — authority, trust,
sell, engage — balanced roughly 4:3:2:1. Reuse each proof story
across at least 3 formats. No post ideas requiring assets I don't
have. The rules must be explicit enough that a regeneration next
month needs zero new decisions from me. PROCESS: Define the
rotation rules first, then generate the calendar, then spot-check
5 random entries against my stated capacity. OUTPUT FORMAT: RULES
section, calendar table (date, platform, hook, format, job, proof
source), and 10 spare evergreen ideas for dead days.
```

PRO TIP — be brutal about capacity. A 5-post week you skip beats nothing on paper; a 3-post week you actually ship compounds.

03 The Build-in-Public Extraction Ritual

WHEN TO USE — you do interesting work every week but post none of it. Your best content already happened.

```
You are a creator-marketing strategist who turns real work into
content. GOAL: Build my build-in-public system: the weekly
extraction ritual that mines what I actually did for content, the
post formats per platform, and this week's posts drafted from my
real material. CONTEXT: What I made or shipped recently:
[PASTE — VIDEOS PUBLISHED, PROJECTS, PROBLEMS SOLVED, THINGS
  THAT FLOPPED]. Platforms: [LIST]. What I can't share:
[CLIENT / PERSONAL LINES]. My voice:
[PASTE 2 POSTS I LIKED WRITING].
CONSTRAINTS: Every post anchored to a real artifact — a
screenshot, a number, a before/after, a lesson from an actual
failure. No invented anecdotes. Confidentiality lines respected —
anonymize, don't fabricate. The weekly ritual must take under 30
minutes. PROCESS: Design the extraction questions (what broke,
what surprised, what would I tell past-me), build the format map,
then draft this week's posts from my pasted material. OUTPUT
FORMAT: The weekly ritual (questions + timing), format map per
platform, and 3-5 drafted posts from my real work.
```

PRO TIP — the extraction ritual ends "nothing to post" permanently. Run it every Friday while the week is still fresh.

04 The Hook Judge

WHEN TO USE — before anything in the queue goes live. Stop being the only reviewer of your own hooks.

```
You are a quality-systems designer who builds LLM-as-judge review
gates. GOAL: Build my hook-and-post quality gate — the rubric, the
judge prompt, and the pass/fail protocol — so nothing publishes on
the maker's own opinion. CONTEXT: What I publish:
[SHORT-FORM / POSTS / NEWSLETTER]. Past
posts that flopped and why I think they flopped:
[REAL EXAMPLES — THESE BECOME RUBRIC ITEMS]. What a weak month costs me: [STAKES]. A
sample post to calibrate on: [PASTE ONE].
CONSTRAINTS: The judge defaults to FAIL on uncertainty — a false
pass costs more than a false block. Rubric items must be
checkable, not vibes: is the promise clear by line one, does the
hook work without sound or context, is there one idea per post.
Reasons before scores. The judge prompt runs in a fresh session —
the maker never grades their own work. PROCESS: Convert my flops
into rubric items, design the judge prompt, then run my pasted
sample through it as demonstration. OUTPUT FORMAT: Rubric table,
judge prompt in a code block, pass/fail protocol, and the graded
sample.
```

PRO TIP — run the judge on your 5 best-performing posts too. If they'd fail your rubric, the rubric is wrong — fix it now.

05 The Creator Teardown

WHEN TO USE — a creator in your lane is winning and you're guessing why. Stop guessing; analyze.

```
You are a competitive content analyst for creators. GOAL: Build a
              reusable creator-teardown template, then apply it to the top 3
              creators in my lane — so I have both the filled analysis AND the
              blank template for anyone I study next. CONTEXT: My positioning:
              [WHAT I MAKE, FOR WHOM, WHAT I WANT FROM IT]. The creators: [NAMES + HANDLES]. Their
              material I've collected:
              [PASTE HOOKS, CAPTIONS, POST CADENCE, FORMATS, ANYTHING
                OBSERVED]. CONSTRAINTS: Only claims supported by the pasted material —
              mark anything inferred as INFERRED. Focus on exploitable gaps
              (formats they ignore, questions their audience asks that they
              never answer, cadence holes), not admiration. Never propose
              copying a creator's voice or format wholesale — extract
              principles, not clones. PROCESS: Build the template first (hook
              patterns, format mix, cadence, audience promise, gaps). Then fill
              per creator. Then write a "where I win" synthesis. OUTPUT FORMAT:
              Blank template, one filled teardown per creator, and a 5-bullet
              positioning brief for my own content.
```

PRO TIP — paste their 10 most recent hooks verbatim. Hook patterns are the most transferable, least clone-y thing you can extract.

06 The Newsletter Engine

WHEN TO USE — you rent your audience from algorithms. The list is the only channel you own.

```
You are a newsletter strategist and copy chief. GOAL: Build my
              complete newsletter operating system: format, weekly template,
              welcome sequence, and the first issue written. CONTEXT: Audience:
              [WHO FOLLOWS ME + WHERE FROM]. What they
              struggle with: [REAL PROBLEMS]. My proof
              bank: [WINS / PROJECTS / LESSONS]. What I
              sell or promote, if anything:
              [OFFER OR NONE]. Voice samples:
              [PASTE 2-3 THINGS I'VE WRITTEN].
              CONSTRAINTS: The issue template must be completable in under 60
              minutes a week — timed sections, no blank-page steps. Welcome
              sequence: 3 emails, value-first, one soft pitch total. Match my
              pasted voice exactly — no generic newsletter-speak. Every issue
              must reuse at least one asset from my existing content queue, not
              demand new creation. PROCESS: Design the format, then the template
              with timed sections, then write the 3 welcome emails and issue #1.
              OUTPUT FORMAT: Four sections — FORMAT DECISIONS, WEEKLY TEMPLATE,
              WELCOME SEQUENCE, ISSUE ONE.
```

PRO TIP — the 60-minute template is what keeps it alive. Newsletters die from production cost, not from lack of ideas.

07 The Pillar Article System

WHEN TO USE — short-form gets the reach, but search and AI engines cite the long stuff. Build the anchor layer.

```
You are a senior SEO content strategist for creator brands. GOAL:
              Build my reusable pillar-article production system:
              topic-selection rules, a full article template, and one complete
              example article for my niche — the long-form anchors my short-form
              clips point back to. CONTEXT: My niche:
              [WHAT I MAKE CONTENT ABOUT]. My site or
              blog: [URL OR "NONE YET"]. Who I want
              reading: [AUDIENCE]. Topics I have real
              experience and proof in:
              [LIST — REAL ONLY]. CONSTRAINTS: The
              template must include a quick-answer block for AI search engines,
              an FAQ section formatted for schema, internal-linking slots, and
              first-hand proof points from my own work. No invented statistics
              anywhere — mark every stat slot as [VERIFY]. Each article must
              spawn at least 5 short-form clips or posts — build that extraction
              into the template. PROCESS: Define topic-selection criteria first,
              then the template, then write the example article at 2,000+ words
              following it. OUTPUT FORMAT: Three sections — SELECTION RULES,
              TEMPLATE, EXAMPLE ARTICLE.
```

PRO TIP — one pillar a month is enough. It's the permanent home your 30-day queue links to when a post earns a click.

08 The AEO Answer Pack

WHEN TO USE — your future audience asks ChatGPT and Perplexity who to follow and what to watch. Show up in the answer.

```
You are an answer-engine-optimization specialist. GOAL: Build my
              AEO asset pack: the 20 questions AI engines get asked in my
              content category, with authoritative self-contained answers that
              feature me naturally, plus FAQPage schema for my site. CONTEXT:
              Who I am:
              [NAME + WHAT YOU MAKE + FOR WHOM]. What
              people in my category ask AI tools:
              [E.G. "BEST WAY TO REPURPOSE A PODCAST", "HOW OFTEN TO POST
                ON…"]. My genuine differentiators with proof:
              [REAL ONLY]. Site:
              [URL]. CONSTRAINTS: Every answer must be
              quotable standalone (no "as mentioned above"), factually
              verifiable, 40-80 words, and mention me naturally exactly once. No
              superlatives without proof. Questions weighted toward what my
              future audience actually asks, not vanity queries. PROCESS:
              Generate the question list first, then write the answers, then
              output the schema. OUTPUT FORMAT: Q&A markdown ready to paste
              into my site + a valid FAQPage JSON-LD block.
```

PRO TIP — publish the Q&A on the same site as your pillar articles. AI engines lift answers from pages that already rank as the source.

09 The Lead Magnet & Nurture Build

WHEN TO USE — you have attention but nothing to capture it. Views that don't land on a list evaporate.

```
You are a funnel copywriter for creators. GOAL: Build my complete
              capture asset: the lead magnet itself (outlined AND written), the
              delivery mechanism, and the nurture sequence that follows — ready
              to wire into my email tool. CONTEXT: Audience:
              [WHO + WHAT THEY STRUGGLE WITH]. What I
              offer after the magnet:
              [PRODUCT / SERVICE / JUST THE LIST]. My
              proof: [REAL RESULTS ONLY]. Delivery
              constraint:
              [E.G. PINNED-COMMENT LINK, LINK-IN-BIO — NO ENGAGEMENT-BAIT
                MECHANICS]. CONSTRAINTS: The magnet must solve one real problem completely
              in under 15 minutes of the reader's time — a checklist, template,
              or swipe file beats an ebook. Nurture: 4 emails, value-first, one
              clear pitch at the end. Every email survivable standalone. Match
              my voice: [PASTE SAMPLE]. PROCESS: Pick the
              magnet format against my audience's problem, write it, then the
              delivery step, then the sequence. OUTPUT FORMAT: The lead magnet
              in full, delivery setup note, 4 nurture emails, and the wiring
              checklist (tags, triggers, delays).
```

PRO TIP — deliver via a pinned-comment link, not "comment WORD and I'll DM you" mechanics. Engagement-bait tricks get throttled; a clean link doesn't.

10 The Proof Story Bank

WHEN TO USE — your best moments live in scattered DMs, analytics screenshots, and memory. Bank them once, reuse forever.

```
You are a story editor who turns raw creator material into
              reusable proof. GOAL: Build my proof story bank — every real win,
              milestone, and lesson written up once in a reusable format — plus
              the interview kit for capturing future ones the week they happen.
              CONTEXT: My raw material:
              [PASTE — ANALYTICS SCREENSHOTS DESCRIBED, DMS FROM FOLLOWERS,
                MILESTONES, COLLABS, FAILURES THAT TAUGHT ME SOMETHING]. Where these stories will get used:
              [POSTS / NEWSLETTER / PITCHES / ABOUT PAGE]. CONSTRAINTS: Only real, verifiable material — if a number is
              missing, write [FIND SOURCE] instead of inventing it. Structure
              each story: situation, obstacle, what I did, result, lesson. Every
              story tagged by the job it can do — authority, trust, sell, engage
              — so it plugs straight into my content calendar. PROCESS: Extract
              stories from the raw material, flag the missing pieces, write each
              one, then build the capture kit for future wins. OUTPUT FORMAT:
              The story bank (tagged entries), a gaps list, and the blank
              capture template + interview questions.
```

PRO TIP — this bank feeds Prompts 01, 02, and 06. Build it once and the "proof bank" bracket in every other prompt is a paste, not a memory test.

11 The Batch Content Fleet

WHEN TO USE — 30 days of content is too big for one chat. Design the fan-out before you brute-force it.

```
You are an AI systems architect who designs multi-agent content
workflows. GOAL: Design the multi-agent orchestration for my
monthly content batch —
[E.G. "DRAFT 20 SHORT-FORM SCRIPTS", "WRITE 12 NEWSLETTER
  SECTIONS", "CAPTION 30 CLIPS"]
— decomposition, agent briefs, and the verification layer that
catches agent errors before I publish them. CONTEXT: The full
batch: [DESCRIBE + VOLUME]. What one unit
done well looks like:
[PASTE ONE GOOD EXAMPLE]. Tools available:
[CLAUDE / CLAUDE CODE / SCHEDULER]. What's
gone wrong when I batched before: [HONEST].
CONSTRAINTS: Every agent brief must be self-contained — no shared
conversation memory. Include a verification stage: outputs get
checked against my voice and rules, not trusted. Define what
happens on partial failure. State which stages need the big model
and which don't. PROCESS: Decompose, write one complete agent
brief as the template, design the verify/merge stage, then the
failure playbook. OUTPUT FORMAT: Pipeline diagram (text), the
template agent brief, verification checklist, failure
playbook.
```

PRO TIP — the verification stage is the whole game. A fleet that drafts 20 scripts you must rewrite saved you nothing.

12 The Voice & Workflow Skill Factory

WHEN TO USE — you re-explain your voice, format rules, and process to Claude every single session. Stop.

```
You are a Claude Code skills engineer. GOAL: Convert my content
workflow into a complete, correct SKILL.md I can drop into
~/.claude/skills/ — so my voice, format rules, and process become
a one-command procedure forever. CONTEXT: The workflow, exactly as
I do it:
[DESCRIBE EVERY STEP — HOW I DRAFT, MY HOOK RULES, CAPTION
  FORMAT, WHAT I ALWAYS FIX BY HAND]. My voice rules and banned phrases:
[LIST + PASTE 2 SAMPLE POSTS]. When I want
it to trigger: [PHRASES I'D NATURALLY SAY].
Inputs that change each run:
[TOPIC, PLATFORM, LENGTH]. CONSTRAINTS:
Frontmatter with name + description containing strong trigger
phrases so auto-invocation actually fires. Steps must be
executable without this conversation's context. Bake in every
voice rule and gotcha I listed as a hard rule. PROCESS: Draft the
skill, then simulate a fresh session invoking it with only the
skill text — patch anything that would fail. OUTPUT FORMAT: The
complete SKILL.md in one code block, plus a 3-line install
note.
```

PRO TIP — this is the purest "assets not answers" move in the pack. The skill outlives the free window and works on any model.

13 The Prompt Library with Evals

WHEN TO USE — your best prompts live in random notes and old chats, and you never know which version was the good one.

```
You are a prompt engineer who treats prompts as versioned, tested
              assets. GOAL: Organize my scattered content prompts into a
              structured library — each one cleaned, parameterized, and paired
              with a lightweight eval — plus the template for adding new ones.
              CONTEXT: My prompts, pasted raw:
              [DUMP THEM ALL — HOOK PROMPTS, CAPTION PROMPTS, SCRIPT PROMPTS,
                DUPLICATES AND BROKEN ONES INCLUDED]. What I use them for: [CONTEXTS]. Where
              the library will live:
              [NOTES APP / REPO / FILES]. CONSTRAINTS:
              Each entry gets a name, purpose, the prompt with [PARAMETERS]
              marked, a 3-case eval (typical topic, weird topic, off-brand topic
              + what good output looks like), and version notes. Merge
              duplicates, kill dead ones — show me what you cut and why.
              PROCESS: Inventory and cluster, clean and parameterize, write
              evals, then compile. OUTPUT FORMAT: The library as organized
              markdown, a CUTS section with reasoning, and the blank entry
              template.
```

PRO TIP — the eval column is what makes model migrations painless. When the next model drops, rerun the evals and know in minutes what still works.

14 The Content Ops Triage Audit

WHEN TO USE — everything in your content ops feels automatable and you don't know what's actually worth building.

```
You are an operations consultant who identifies automation ROI
              honestly — including the automations NOT worth building. GOAL:
              Audit my recurring content work and rank every automation
              candidate by real ROI — build cost, maintenance cost, failure
              risk, time saved — with a verdict per item: build now, build
              later, never automate. CONTEXT: My recurring content tasks,
              brain-dumped:
              [EVERYTHING REPETITIVE — CAPTIONING, RESIZING, SCHEDULING,
                REPLYING, REPURPOSING — WITH ROUGH HOURS/WEEK EACH]. My stack: [TOOLS I ALREADY RUN]. My
              technical skill, honest: [LEVEL]. Hourly
              value of my time: [RATE]. CONSTRAINTS:
              Maintenance cost counts — an automation that breaks monthly is a
              liability. "Never automate" is a required category (your voice,
              community replies, creative judgment). Each "build now" gets a
              one-line spec and effort estimate. PROCESS: Cluster the tasks,
              score each candidate on the four factors, rank, then sanity-check
              the top 3 against my actual skill level. OUTPUT FORMAT: Ranked
              table (task, hours saved/month, build effort, maintenance risk,
              verdict), top-3 one-line specs, and the never-automate list with
              reasons.
```

PRO TIP — the never-automate list protects the thing people actually follow you for. Automate the plumbing, never the voice.

15 The Double-Down Decision Memo

WHEN TO USE — you're spread across four platforms and three formats, and you keep circling the "what should I focus on" question without resolving it.

```
You are a decision analyst. Your job is clarity, not comfort.
              GOAL: Produce a decision memo on
              [THE CALL — E.G. "WHICH PLATFORM/FORMAT TO DOUBLE DOWN ON FOR
                THE NEXT 90 DAYS"]
              that surfaces what I'm actually weighing, then give a
              recommendation with explicit reasoning I can disagree with.
              CONTEXT: The decision and deadline:
              [SPECIFICS]. Options as I see them:
              [PLATFORMS / FORMATS IN PLAY]. What I'm
              afraid of: [HONEST]. Relevant numbers:
              [PASTE REAL ANALYTICS — REACH, RETENTION, LIST GROWTH, TIME
                SPENT PER FORMAT]. What I'd do if I were braver:
              [ANSWER IT]. CONSTRAINTS: Steelman every
              option, including the one I'm avoiding. Separate reversible from
              irreversible elements — most content bets are reversible, so weigh
              speed over certainty. Name the biases most likely distorting my
              view of THIS decision (sunk cost on the platform I've grinded
              longest is the usual one). No fence-sitting — end with a
              recommendation. PROCESS: Frame the real decision (often not the
              stated one), analyze, then recommend. OUTPUT FORMAT: The real
              question, options with steelmans, reversibility analysis, bias
              check, recommendation with confidence level, and a "revisit if"
              trigger list.
```

PRO TIP — run this AFTER a month of shipping the queue from Prompt 01. Real 30-day numbers turn this from opinion into evidence.

> **The through-line:** Prompt 01 builds the queue. Prompts 02-14 build the machine around it — rules, rituals, gates, banks, fleets, skills. Prompt 15 tells you where to aim it next. One sitting, one system, every month after this one gets cheaper.

WANT IT DONE FOR YOU?

We build the systems.

You keep creating.

SkynetLabs builds AI-powered content systems for creators and brands — content engines, repurposing pipelines, publishing automation that fans one asset out across every platform. Real systems, running on real projects, published openly.
