FOR E-COMMERCE OWNERS

15 Fable 5 Prompts That Write Your Whole Product Catalog.

Claude Fable 5 is the strongest model Anthropic has ever shipped, and it is sitting inside every paid Claude plan right now. These 15 prompts turn it into your **catalog copywriter, email team, and support department** — each one built for the work a store owner actually does between orders.

FABLE 5 FREE WINDOW CLOSES JULY 19

Fable 5 is included in paid Claude plans until July 19, 2026 at 11:59 PM PT — after that it moves to usage credits. Run these while it costs you nothing extra.

15	6	1
COPY-PASTE PROMPTS	PARTS PER PROMPT: ROLE TO FORMAT	REUSABLE ASSET PER PROMPT

How to run these in 3 steps.

No technical setup. If you can paste text, you can run every prompt in this pack.

1

Open Claude and pick Fable 5

Go to `claude.ai` (or Claude Code if you use it) and select **Fable 5** in the model picker. It is included in every paid plan until July 19 — no extra cost during the window.

2

Paste the prompt, fill the [BRACKETS]

Copy a prompt from this pack exactly as written. Everything in `[UPPERCASE BRACKETS]` is yours to fill — your product CSV rows, your real reviews, your support tickets. The more real detail you paste, the better the output. Fable 5 handles huge amounts of context, so do not summarize — paste the whole export.

3

Save the output as a template

Every prompt here produces something reusable — a description template, an email sequence, a macro pack. Save each one. That is the point: you keep the asset long after the free window closes.

Pro habit: end every session with one more line.

Before you close the chat, type: "Turn what you just built into a fill-in-the-blanks template I can reuse for every future product." Fable 5 will package its own work. That template is yours forever.

01 The Bulk Product Description Machine

When to use: any time you have 10, 50, or 500 products with thin or missing descriptions — this is the title prompt of the pack.

```
You are a senior e-commerce copywriter who writes product descriptions that convert browsers into buyers at scale.

GOAL: Write consistent, on-brand descriptions for every product I paste — long version for the product page, short version for collection grids — and build me a reusable description template so future products take minutes.

CONTEXT: My store sells [WHAT + TO WHOM]. Brand voice reference — two descriptions I already like: [PASTE THEM]. Product data, straight from my export: [PASTE CSV ROWS: NAME, SPECS, MATERIALS, DIMENSIONS, PRICE, KEY FEATURES]. What buyers ask before purchasing: [TOP QUESTIONS FROM CHAT/EMAIL].

CONSTRAINTS: Use ONLY the specs I pasted — never invent materials, dimensions, or certifications. Every description follows the same structure so the catalog reads as one brand. Benefits before features. No filler adjectives ("amazing", "premium quality"). No fake urgency.

PROCESS: Confirm the structure on the first product, then batch the rest, then hand me the blank template.

OUTPUT FORMAT: Table: product name, long description, 50-word short version — then the reusable template.
```

PRO TIP Paste 30-50 CSV rows at a time — Fable 5 holds the structure across the whole batch without drifting.

02 The Brand Voice Codex

When to use: once, before everything else — it becomes the paste-in voice guide for every other prompt in this pack.

```
You are a brand strategist who reverse-engineers a brand's voice from its existing copy.

GOAL: Extract my brand voice into a one-page codex — tone rules, vocabulary, sentence rhythm, words we never use — that I can paste into any future writing session so everything sounds like us.

CONTEXT: My best existing copy: [PASTE 3-5 PIECES: PRODUCT PAGE, EMAIL, ABOUT PAGE, TOP SOCIAL POST]. Who buys from us: [CUSTOMER PICTURE]. Brands whose voice we admire: [1-2 NAMES + WHY]. Copy of ours that felt OFF-brand: [PASTE IF ANY].

CONSTRAINTS: Every rule must cite an example from MY pasted copy — no generic advice ("be authentic"). Include a never-say list. Include 3 before/after rewrites showing the voice applied. Short enough to paste into any chat.

PROCESS: Analyze the samples, name the patterns, then stress-test the codex by rewriting one weak paragraph with it.

OUTPUT FORMAT: One-page codex in markdown: voice summary, 6-8 rules with examples, never-say list, the 3 rewrites.
```

PRO TIP Save the codex as a text file — paste it at the top of prompts 1, 7, 8, 9, and 11 and the whole store speaks one voice.

03 The Collection Page Copy Builder

When to use: for every collection/category page that currently has zero text — these pages are where search traffic actually lands.

```
You are an e-commerce SEO copywriter who writes category pages that rank AND read like a human wrote them.

GOAL: Write the copy for my collection page [COLLECTION NAME] — intro block, buying-guide section, and FAQ — matched to what shoppers actually search for.

CONTEXT: Products in this collection: [PASTE THE LIST WITH KEY SPECS]. Search terms I want this page to answer: [KEYWORDS OR "SUGGEST FROM THE PRODUCTS"]. How customers choose between these products: [THE REAL DECISION FACTORS]. My brand voice codex: [PASTE FROM PROMPT 2].

CONSTRAINTS: Written for a shopper deciding, not a search engine crawling — keywords woven in, never stuffed. Product claims only from the specs I pasted. FAQ answers the questions buyers genuinely have, not invented ones. Intro under 120 words — nobody reads more above a product grid.

PROCESS: Map search intent to the collection, draft each block, then cut every sentence that does not help someone choose.

OUTPUT FORMAT: Intro block, buying guide with H2/H3 headings, 5-question FAQ, suggested meta title + description.
```

PRO TIP Run this for your 5 highest-traffic collections first — they compound while you sleep.

04 The Product Title + Meta Optimizer

When to use: when your titles are supplier defaults like "SKU-2291 Cotton Tee Blue L" — batch-fix the whole catalog in one session.

```
You are an e-commerce SEO specialist who optimizes product titles and metadata at catalog scale.

GOAL: Rewrite every product title, meta title, and meta description I paste — searchable, consistent, and human — plus give me the naming convention so new products follow it automatically.

CONTEXT: Current titles and descriptions, from my export: [PASTE CSV ROWS]. How customers describe these products in their own words: [FROM REVIEWS/SUPPORT MESSAGES]. My platform and its limits: [SHOPIFY / WOO / AMAZON + CHARACTER LIMITS].

CONSTRAINTS: Titles front-load what the buyer searches (product type + key attribute), brand-consistent format across the catalog. Meta descriptions under [LIMIT] characters with one concrete reason to click. Attributes only from the pasted data — never guess a size, color, or material. No clickbait.

PROCESS: Define the naming convention on 3 sample products, get the pattern right, then batch the rest.

OUTPUT FORMAT: CSV-style table: handle, old title, new title, meta title, meta description — plus the naming convention doc.
```

PRO TIP Ask for the output as paste-ready CSV columns — most platforms re-import it directly.

05 The Size-Guide + FAQ Builder

When to use: when the same pre-purchase questions keep landing in your inbox — answer them once, on the page, forever.

```
You are a conversion specialist who turns support tickets into product-page content that prevents the tickets.

GOAL: Build the size guide and FAQ blocks for [PRODUCT/CATEGORY] from my real support questions — so buyers stop emailing and start checking out.

CONTEXT: Real pre-purchase questions from my inbox/chat, pasted raw: [PASTE 15-30 TICKETS OR CHAT LOGS]. The actual measurements and fit data I have: [PASTE THE REAL SPEC SHEET / SIZE CHART]. Returns caused by wrong expectations: [THE COMMON REASONS].

CONSTRAINTS: Every FAQ must trace back to a question customers actually asked — no invented ones. Measurements only from my pasted data; if a measurement is missing, output a [MEASURE THIS] slot instead of guessing. Answers honest about limitations — an accurate page beats a returned order.

PROCESS: Cluster the tickets by theme, rank by frequency, write the size guide first, then the FAQ.

OUTPUT FORMAT: Size-guide block, top-8 FAQ with answers, and a list of every [MEASURE THIS] gap.
```

PRO TIP The [MEASURE THIS] list is your homework — filling it kills your top return reason.

06 The Review-Mining Copy Engine

When to use: once a quarter — your customers have already written your best copy; this extracts it.

```
You are a voice-of-customer researcher who mines reviews for the exact language that sells.

GOAL: Mine my real reviews for buying triggers, objections, and customer phrasing — and turn them into a copy bank I can pull from for product pages, emails, and ads.

CONTEXT: Reviews pasted raw and unedited: [PASTE 30-100 REVIEWS — STARS, TEXT, PRODUCT]. Also paste the critical ones: [1-3 STAR REVIEWS — DO NOT FILTER]. What I currently claim on my product pages: [PASTE KEY CLAIMS].

CONSTRAINTS: Quote customers VERBATIM — only phrases that appear in the pasted reviews, marked with quotation marks. Never soften or rewrite a complaint. Flag every claim on my product pages that reviews contradict. Group objections by what actually blocks a purchase.

PROCESS: Extract phrases, cluster into desires / objections / surprise-delights, then map each cluster to where it belongs (page, email, ad).

OUTPUT FORMAT: Copy bank table: verbatim quote, theme, where to use it — plus the contradiction flags.
```

PRO TIP The 1-3 star reviews are the goldmine — every objection they raise becomes a line of pre-emptive copy.

07 The Abandoned-Cart Rescue Sequence

When to use: once — then it runs on every abandoned cart your store ever sees.

```
You are an e-commerce email specialist who writes cart-recovery sequences that feel like helpful follow-up, not pressure.

GOAL: Write my 3-email abandoned-cart sequence — reminder at 1 hour, objection-handler at 24 hours, final note at 72 hours — ready to paste into my email platform.

CONTEXT: My store and typical cart: [WHAT + AVERAGE ORDER VALUE]. The real reasons people hesitate, from reviews and support messages: [PASTE THEM — SHIPPING COST? SIZING? TRUST?]. My shipping and returns terms, exactly: [THE ACTUAL POLICY]. Brand voice codex: [PASTE FROM PROMPT 2]. Discount I am willing to offer, if any: [HONEST — OR NONE].

CONSTRAINTS: No fake urgency or invented scarcity — "selling out fast" only if it is true. Email 2 answers the top real objection, it does not just nag. If no discount, do not imply one. Subject lines a friend would send. Under 120 words per email.

PROCESS: Rank the hesitation reasons, assign one job per email, write all three, then flag where my platform inserts the cart contents.

OUTPUT FORMAT: Three emails with subject line, body, and send timing — plus merge-tag placement notes.
```

PRO TIP Feed it the objection clusters from prompt 6 — the sequence doubles as objection handling.

08 The Post-Purchase Flow

When to use: once — the cheapest revenue in e-commerce is the customer who already bought.

```
You are a retention specialist who designs post-purchase email flows that turn one order into a repeat customer.

GOAL: Write my post-purchase flow — order confirmation with personality, shipping/delivery note, a use-it-well email, a review request, and a cross-sell — timed and ready to load.

CONTEXT: What I sell and typical delivery time: [PRODUCT + REAL SHIPPING WINDOW]. What new customers get wrong or ask after buying: [FROM SUPPORT TICKETS]. Products that naturally pair: [REAL COMBINATIONS FROM YOUR ORDERS]. Brand voice codex: [PASTE FROM PROMPT 2].

CONSTRAINTS: The review ask lands AFTER the real delivery window, never before the product arrives. Cross-sell only pairings I listed — no generic "you may also like". The use-it-well email gives genuine value with zero sell. Delivery promises match my actual shipping terms.

PROCESS: Map the customer's first 21 days, write each email in sequence, then check the timing against my delivery window.

OUTPUT FORMAT: Flow table: day, email, subject, body — ready to paste into [KLAVIYO / MAILCHIMP / PLATFORM].
```

PRO TIP Ask the review request to name the specific delight customers mention in reviews — completion rates jump.

09 The Product Launch Pack

When to use: every new product drop — one session produces the email, the socials, and the page copy together.

```
You are a product launch copywriter for e-commerce brands.

GOAL: Build the full launch pack for [NEW PRODUCT]: announcement email, Instagram caption + carousel outline, a short Reel script, and the launch-day product page intro — all telling one coherent story.

CONTEXT: The product, real specs only: [PASTE THE SPEC SHEET]. Why we made it — the true origin: [THE REAL REASON, EVEN IF UNGLAMOROUS]. Who asked for it: [CUSTOMER REQUESTS/REVIEWS THAT LED HERE]. Launch offer, if any: [REAL TERMS OR NONE]. Brand voice codex: [PASTE FROM PROMPT 2].

CONSTRAINTS: One story angle across all pieces, told platform-native — not one caption pasted four times. Specs only from the sheet. No "revolutionary", no fake scarcity, no countdown unless a real deadline exists. Reel script uses only shots I can film with the product in hand.

PROCESS: Pick the strongest angle from the origin + requests, pitch me 2 alternatives, then write the pack on the chosen angle.

OUTPUT FORMAT: Labeled blocks: EMAIL / IG CAPTION / CAROUSEL OUTLINE / REEL SCRIPT / PAGE INTRO.
```

PRO TIP The unglamorous true origin ("customers kept asking") outsells invented hype every time.

10 The Ad Angle Matrix

When to use: before spending another dollar on ads — build the angle map from what customers already said.

```
You are a direct-response strategist who builds ad angles from voice-of-customer data, not guesses.

GOAL: Build my ad angle matrix for [PRODUCT] — every distinct angle worth testing, with hook lines and primary text for each — sourced from my real reviews and customer language.

CONTEXT: The copy bank / review mining from prompt 6: [PASTE IT] — or raw reviews: [PASTE 30+]. Who actually buys: [REAL CUSTOMER PICTURE FROM ORDERS]. Ads I have run and how they did: [HONEST — INCLUDING FLOPS]. Platform: [META / TIKTOK / GOOGLE].

CONSTRAINTS: Every angle traces to a verbatim customer phrase — quote it in the matrix. Claims only from real product specs and real reviews. No fake urgency, fake discounts, or "9 out of 10 customers" style invented stats. Angles must be genuinely distinct — different desire or objection, not synonyms.

PROCESS: Cluster the language into desires and objections, derive one angle per cluster, then write 2 hooks + primary text per angle.

OUTPUT FORMAT: Matrix table: angle, source quote, hook A, hook B, primary text, suggested visual.
```

PRO TIP Test angles, not creatives — one winning angle survives a hundred creative refreshes.

11 The Hero Product Landing Page

When to use: for the one product that carries your store — it deserves more than a template product page.

```
You are a conversion copywriter who writes long-form product landing pages for e-commerce hero products.

GOAL: Write the full landing page for [HERO PRODUCT] — headline through final CTA — section by section, so my developer or page builder can drop it straight in.

CONTEXT: Real specs: [PASTE SPEC SHEET]. Verbatim review quotes I am allowed to use: [PASTE WITH NAMES/INITIALS AS PERMITTED]. Top 3 objections from prompt 6: [PASTE]. What makes this product different, honestly: [THE TRUE DIFFERENCE — OR "HELP ME FIND IT"]. Price and guarantee terms: [EXACT, REAL TERMS].

CONSTRAINTS: Every claim backed by a spec or a pasted quote. Reviews verbatim, attributed only as permitted. Objections answered on the page before the buyer scrolls to price. Guarantee stated exactly as my policy reads — no rounding "30 days" up to "risk-free forever". One CTA, repeated — not five competing ones.

PROCESS: Outline the section flow, write each section, then do a skeptic pass: challenge every claim and cut what cannot be defended.

OUTPUT FORMAT: Section-by-section blocks with headline, body, and layout notes per section.
```

PRO TIP The skeptic pass is the asset — keep the list of defensible claims for every future ad and email.

12 The Seasonal Sale Campaign Planner

When to use: 2-3 weeks before any sale — BFCM, summer clearance, anniversary — plan once, execute calmly.

```
You are an e-commerce campaign planner who runs sales that make money without training customers to wait for discounts.

GOAL: Plan my [SALE NAME + DATES] campaign end to end: the offer structure, the email calendar, the social plan, and every piece of copy — as one executable timeline.

CONTEXT: The real offer: [EXACT DISCOUNT/BUNDLE + WHAT IT APPLIES TO]. Margins I must protect: [PRODUCTS THAT CANNOT BE DISCOUNTED]. My list and social reach: [ROUGH SIZES]. How my last sale went: [HONEST — WHAT SOLD, WHAT FLOPPED]. Brand voice codex: [PASTE FROM PROMPT 2].

CONSTRAINTS: The deadline is real and stated once per piece — no fake extensions, no "last chance" three days in a row. Every email earns its send with something beyond "reminder". Excluded products stay excluded everywhere. Post-sale email planned too — full-price buyers from last week get handled with care.

PROCESS: Structure the offer, build the timeline, then write every asset in calendar order.

OUTPUT FORMAT: Campaign calendar table (date, channel, asset), then each asset written out.
```

PRO TIP Write the post-sale full-price-buyer email first — it is the one everyone forgets and regrets.

13 The Support Macro Pack

When to use: when you or your VA retype the same answers daily — build the macro library from your real tickets.

```
You are a customer-support lead who writes macros that sound like a helpful human, not a canned response.

GOAL: Build my support macro pack — a ready-to-save reply for every recurring situation in my inbox — in my brand voice, with clear personalization slots.

CONTEXT: Real tickets, pasted raw: [PASTE 20-40: WHERE IS MY ORDER, RETURNS, DAMAGED ITEM, SIZE EXCHANGE, DISCOUNT REQUESTS, ALL OF IT]. My actual policies: [SHIPPING, RETURNS, EXCHANGE — EXACT TERMS]. Replies of mine that customers thanked me for: [PASTE 2-3].

CONSTRAINTS: Every macro states what happens next and when — vague reassurance is banned. Policy lines match my pasted terms word-for-word, never a more generous paraphrase. Angry-customer macros acknowledge first, solve second. Mark every [PERSONALIZE] slot explicitly.

PROCESS: Cluster tickets by situation, rank by frequency, write macros for the top 12, then flag which situations should never get a macro.

OUTPUT FORMAT: Macro library: situation, trigger phrases, the reply, personalization slots — plus the never-macro list.
```

PRO TIP The never-macro list matters as much as the macros — some tickets deserve a human from word one.

14 The Returns Page a Human Can Read

When to use: when your policy page reads like a legal deposition — clarity here quietly lifts conversion sitewide.

```
You are a UX writer who turns policy legalese into pages customers actually understand — without changing what the policy says.

GOAL: Rewrite my returns/shipping/policy pages in plain, human language — same rules, zero ambiguity — plus a short version for the product page and checkout.

CONTEXT: My current policy pages, pasted in full: [PASTE THEM]. The policy questions support still gets DESPITE these pages: [PASTE THE TICKETS]. Legal or marketplace requirements I must keep: [ANYTHING MANDATED]. Brand voice codex: [PASTE FROM PROMPT 2].

CONSTRAINTS: The rules themselves do not change — rewrite the words, not the policy. If a rule is genuinely ambiguous, flag it as [DECISION NEEDED] instead of picking an interpretation. Lead with what customers can do, not what they cannot. Every support question from my pasted tickets must be answerable from the new page.

PROCESS: Extract the actual rules, rewrite in plain language, then test each pasted support question against the new page.

OUTPUT FORMAT: Full rewritten page, 80-word short version, and the [DECISION NEEDED] list.
```

PRO TIP Put the 80-word version near the add-to-cart button — hesitant buyers read policies before they buy.

15 The Product Photography Shot-List Brief

When to use: before every shoot — whether it is a hired photographer or you with a phone on a Saturday.

```
You are an e-commerce creative director who plans product shoots that answer buyer questions visually.

GOAL: Build the complete shot-list brief for shooting [PRODUCT/COLLECTION] — every shot, its purpose, and where it will be used — so nothing gets reshot next month.

CONTEXT: The products: [LIST + KEY FEATURES BUYERS CARE ABOUT]. Questions and doubts from reviews and tickets: [THE ONES A PHOTO COULD ANSWER — SIZE? TEXTURE? HOW IT FITS?]. Where images go: [PRODUCT PAGE, ADS, SOCIAL, EMAIL]. My setup: [PHOTOGRAPHER / PHONE + BUDGET]. Brand look: [DESCRIBE OR PASTE REFERENCE LINKS].

CONSTRAINTS: Every shot must answer a real buyer question or serve a named placement — no "nice to have" filler. Include scale-reference shots for anything customers misjudge the size of. Realistic for my stated setup and budget. Flag which shots double as ad creative for the prompt-10 angles.

PROCESS: Map buyer questions to shots, order the list by setup so the shoot day flows, then mark the minimum-viable set if time runs short.

OUTPUT FORMAT: Shot table: #, shot description, buyer question it answers, placement, priority — plus the shoot-day run order.
```

PRO TIP Run this after prompts 6 and 10 — the shot list inherits every objection a photo can kill.

Want it done for you?

SkynetLabs builds AI systems for businesses that refuse to be average — automation that runs your follow-up, websites that convert, and content engines that post while you sell. If you would rather pack orders than run prompts, that is literally what we are for.

AI AUTOMATION | WEBSITES THAT CONVERT | CONTENT ENGINES
