FOR HR + OPS MANAGERS · FREE PROMPT PACK

12 Fable 5 Prompts for Policies, Onboarding, Reviews.

Handbooks, 30/60/90 plans, interview kits, SOPs, difficult conversations — 12 copy-paste master prompts built for the people side of the business. Each one produces a **reusable system**, not a one-off answer.

FABLE 5 FREE WINDOW CLOSES JULY 19

Fable 5 is included in paid Claude plans until July 19, 2026, 11:59pm PT — after that it moves to usage credits. Run these while it's included.

POLICIES · ONBOARDING · REVIEWS · SOPS

By Waseem Nasir · SkynetLabs · @skynetlabs

Three steps. That's it.

No plugins, no setup. If you have a paid Claude plan, you already have everything you need.

1

Open Claude and pick Fable 5

Go to `claude.ai` (or Claude Code in your terminal) and select **Fable 5** from the model picker. It's included in every paid plan until July 19, 2026 — up to 50% of your weekly usage.

2

Paste a prompt, fill the brackets

Copy any prompt from this pack and replace everything in `[BRACKETS]` with your real details — your current handbook, your actual role description, the real meeting transcript. The more real material you paste, the better the output. Fable 5 handles huge context, so don't hold back.

3

Save the output as a system

Every prompt here returns something reusable — a checklist, a template, a rubric. Save it. When a prompt earns its keep twice, ask Claude: `"Convert what we just did into a reusable skill"` — and it's yours on any model, forever.

> **Why these work:** each prompt follows the same skeleton — role, goal, real context, hard constraints, exact output format. Fable 5 plans backward from goals; these prompts hand it the goal and get out of the way. One more thing: AI output on policy and employment topics is a draft, not legal advice — anything jurisdiction-dependent gets flagged for counsel, and the prompts enforce that.

01 The Employee Handbook Drafter

WHEN TO USE — your policies live in old emails, tribal memory, and one PDF from 2019 nobody has read.

```
You are an HR operations lead who turns scattered practice into
clear written policy. GOAL: Draft the employee handbook (or the
single policy I name) as a working document my team can actually
follow — plus the standing structure I extend every time a new
policy is needed. CONTEXT: The company:
[SIZE, INDUSTRY, REMOTE/HYBRID/ONSITE].
Policies I need covered:
[LIST — PTO, EXPENSES, REMOTE WORK, CONDUCT…]. How things actually work today, honestly:
[CURRENT UNWRITTEN PRACTICE]. Jurisdiction:
[COUNTRY/STATE]. CONSTRAINTS: This is not
legal advice — mark every jurisdiction-dependent item (leave law,
overtime, termination, classification) with [VERIFY WITH COUNSEL]
and never invent legal requirements. Plain language, no
policy-speak. Each policy ends with a NEVER-DO section for
managers. Only rules we will actually enforce — flag anything
aspirational. PROCESS: Outline the structure first, draft each
policy, then audit: could a new manager apply this without asking
anyone? Patch until yes. OUTPUT FORMAT: Handbook in markdown — per
policy: purpose, the rule, who decides exceptions, NEVER-DO — plus
the counsel-review list collected at the end.
```

PRO TIP — paste how things REALLY work, not how you wish they worked. The gap between the two is where every HR dispute starts.

02 The New-Hire Onboarding System

WHEN TO USE — every new hire's first week is improvised, and day one is spent chasing logins.

```
You are an operations designer who builds onboarding that runs
without the founder in the room. GOAL: Build my new-hire
onboarding system — day-1 access checklist, first-week schedule,
and 30/60/90 plan — as templates I reuse on every hire. CONTEXT:
The role being onboarded: [TITLE + TEAM].
Tools and systems they'll need:
[EMAIL, SLACK, CRM, PAYROLL, BUILDING ACCESS…]. What past new hires were still missing in week two:
[LIST FROM PAINFUL MEMORY]. Who owns each
provisioning step today:
[HONEST — OFTEN "NOBODY"]. CONSTRAINTS:
Every access item names an owner and a deadline of day one — no
"IT will get to it." The 30/60/90 plan defines what SUCCESS looks
like at each gate, agreed with the manager, not vague "ramping
up." Include the pre-start checklist that runs the week BEFORE day
one. PROCESS: Map everything a productive employee touches, work
backward to provisioning steps, then build the three templates.
OUTPUT FORMAT: Pre-start checklist, day-1 access table (item,
owner, deadline), week-1 schedule, and the 30/60/90 plan template
with success criteria per gate.
```

PRO TIP — run it once per role, save the output, and onboarding becomes a 10-minute copy-adjust job for every future hire.

03 The Job Description + Scorecard Builder

WHEN TO USE — you're hiring, and the current JD is a wish list of 14 responsibilities nobody can be measured against.

```
You are a talent operations specialist who writes job
descriptions candidates understand and managers can score against.
GOAL: Write the job description AND the hiring scorecard for this
role — so screening, interviewing, and the 90-day review all
measure the same thing. CONTEXT: The role:
[TITLE + TEAM + WHO IT REPORTS TO]. The 3-5
outcomes this hire must deliver in year one:
[SPECIFIC — NOT "SUPPORT THE TEAM"]. Why
the last person in this seat struggled or left, if relevant:
[HONEST]. Salary band and location rules:
[RANGE + REMOTE POLICY]. CONSTRAINTS:
Outcomes over duties — every line describes something deliverable,
not an activity. No requirement inflation: separate MUST-HAVE from
trainable. Neutral, bias-checked language throughout. Pay
transparency items are jurisdiction-dependent — flag [VERIFY WITH
COUNSEL]. Scorecard items must be checkable in an interview or
work sample, not vibes. PROCESS: Define outcomes, derive
competencies from them, then write JD and scorecard from the same
list. OUTPUT FORMAT: The JD, the scorecard table (competency,
evidence to look for, 1-4 scale anchors), and the screening
question shortlist.
```

PRO TIP — the "why the last person struggled" line is the highest-value bracket in this pack. It turns a generic JD into a targeted one.

04 The Structured Interview Kit

WHEN TO USE — every interviewer asks their own favorite questions and the debrief is "I liked her."

```
You are an interview designer who builds structured processes
that predict job performance instead of interview performance.
GOAL: Build the complete interview kit for this role — question
set, scoring rubric, and probe questions that get past rehearsed
answers — plus a debrief protocol. CONTEXT: The role and
scorecard:
[PASTE THE JD/SCORECARD — PROMPT 03'S OUTPUT]. Interview stages and who runs each:
[STAGES + INTERVIEWERS]. Bad hires or
near-misses we've had and what we missed:
[HONEST LIST]. CONSTRAINTS: Behavioral and
work-sample questions only — no brainteasers, no "greatest
weakness." Every question maps to a scorecard competency. Each
question gets 2-3 adversarial probes for candidates giving
polished non-answers. Rubric anchors are observable evidence, not
impressions. Include the questions interviewers must NOT ask
(protected characteristics) — [VERIFY WITH COUNSEL] for local
rules. PROCESS: Convert past hiring misses into questions first,
cover remaining competencies, assign questions to stages, then
write the debrief protocol. OUTPUT FORMAT: Per stage: question
list with probes and rubric anchors. Then the do-not-ask list and
the 15-minute debrief agenda.
```

PRO TIP — the adversarial probes are the point. "Walk me through the exact week that happened" separates doers from storytellers.

05 The Performance Review Writer

WHEN TO USE — review season, and every draft you write drifts into vague adjectives by paragraph two.

```
You are an HR business partner who writes performance reviews
              managers can defend and employees can act on. GOAL: Turn my raw
              notes into a complete, evidence-based performance review — and
              flag every gap where I'm about to write an opinion without a fact
              behind it. CONTEXT: The employee's role and level:
              [TITLE + TIME IN ROLE]. My raw notes,
              examples, and metrics from the period:
              [PASTE EVERYTHING — MESSY IS FINE]. The
              goals set at the last review:
              [PASTE OR SAY "NONE WERE SET"]. Rating
              scale we use: [SCALE + DEFINITIONS].
              CONSTRAINTS: Every claim ties to a specific example, metric, or
              dated event from my notes — no "great team player" without an
              incident behind it. Where evidence is missing for a rating I
              implied, insert [ASK MANAGER: what specifically supports this?]
              instead of inventing. Balanced by evidence, not by quota — if the
              period was strong, say so. Development areas come with one
              concrete next step each. PROCESS: Sort my notes into competencies,
              match evidence to ratings, mark the gaps, then draft. OUTPUT
              FORMAT: The review draft, the [ASK MANAGER] gap list, and three
              talking points for delivering it in person.
```

PRO TIP — keep a running notes file per report and paste the whole thing. Fable 5's context window means a year of notes fits.

06 The SOP Factory

WHEN TO USE — a process lives in one person's head, and that person is going on leave in two weeks.

```
You are an operations documentation specialist who turns tribal
              knowledge into procedures anyone can run. GOAL: Convert the
              process I describe into a complete SOP — plus the reusable SOP
              template so every future procedure gets documented the same way.
              CONTEXT: The process, exactly as it's done today:
              [DESCRIBE EVERY STEP, TOOLS, LOGINS NEEDED, WHO DOES WHAT — OR
                PASTE A CALL TRANSCRIPT WHERE THEY EXPLAINED IT]. How often it runs and what happens if it's done
wrong:
              [FREQUENCY + STAKES]. Things that went
              wrong before: [LIST]. CONSTRAINTS: Written
              for someone doing it the FIRST time — every step names the exact
              screen, button, or document. Every past mistake becomes a warning
              box at the step where it happens. Include a "when to stop and
              escalate" rule — SOPs that never escalate hide problems. Under two
              pages per SOP. PROCESS: Draft the steps, then simulate a new
              employee running it with only this document — patch every point
              where they'd get stuck. OUTPUT FORMAT: The SOP (purpose, owner,
              steps with warnings, escalation rule, last-reviewed date) plus the
              blank SOP-TEMPLATE.md.
```

PRO TIP — record the process owner explaining it on a call, paste the transcript, and the SOP writes itself from their own words.

07 The Meeting-to-Action Converter

WHEN TO USE — the meeting ended an hour ago and nobody can say who owns what by when.

```
You are a chief of staff who turns meetings into commitments.
              GOAL: Convert this meeting into a clean action register — every
              decision, owner, and deadline extracted — plus the follow-up
              message ready to send to attendees. CONTEXT: The transcript or my
              raw notes:
              [PASTE THE FULL TRANSCRIPT — FABLE 5 HANDLES ALL OF IT]. Who attended and their roles:
              [NAMES + ROLES]. What the meeting was
              supposed to decide: [THE AGENDA ITEM].
              CONSTRAINTS: Every action needs a named owner and a date — "the
              team will look into it" gets flagged as UNOWNED, not recorded as
              done. Separate DECIDED from DISCUSSED from PARKED — do not upgrade
              a discussion into a decision. Where the transcript is ambiguous
              about who committed, flag it as a question rather than guessing.
              Note anything decided that contradicts an earlier decision I
              mention. PROCESS: Sweep for explicit commitments first, then
              implied ones (flagged as implied), then compile. OUTPUT FORMAT:
              Decision log, action table (action, owner, date, source quote),
              UNOWNED/ambiguous list, and the follow-up message in plain
              text.
```

PRO TIP — the source-quote column ends the "I never agreed to that" conversation before it starts.

08 The Policy Gap Audit

WHEN TO USE — before the audit, the funding round, or the first employment dispute finds the gaps for you.

```
You are an HR compliance auditor. You are skeptical by default
              and you check documents, not intentions. GOAL: Audit my current
              policies and processes for gaps and contradictions, and produce a
              severity-ranked findings report — MUST-FIX separated from
              nice-to-have — plus the reusable audit checklist for next year.
              CONTEXT: Our current policy documents:
              [PASTE THE HANDBOOK / POLICY DOCS — ALL OF THEM]. Headcount, contract types, and locations:
              [FTE/CONTRACTOR SPLIT + JURISDICTIONS].
              Incidents or near-misses we've had:
              [HONEST LIST]. CONSTRAINTS: Every finding
              names the specific document and section (or its absence) with a
              concrete failure scenario — no vague "consider improving."
              Contradictions between documents are findings. This is not legal
              advice: rank gaps by operational risk and mark every
              jurisdiction-dependent item [VERIFY WITH COUNSEL] rather than
              stating what the law requires. PROCESS: Sweep by category —
              hiring, classification, leave, conduct, termination, data handling
              — verify each finding against the pasted text, then compile.
              OUTPUT FORMAT: Severity-ranked findings table, MUST-FIX list in
              fix order, counsel-review list, and the blank POLICY-AUDIT.md
              checklist.
```

PRO TIP — paste ALL the documents, including the outdated ones. Contradictions between the 2019 PDF and current practice are exactly what this catches.

09 The Offboarding + Knowledge-Capture Kit

WHEN TO USE — someone resigned, and in four weeks everything they know walks out the door silently.

```
You are an operations continuity specialist. Your job is to find
what leaves the company silently when a person leaves. GOAL: Build
the offboarding plan for this departure — access revocation,
handover schedule, and the knowledge-capture interview that
extracts what only they know — plus the reusable offboarding
checklist. CONTEXT: The departing person's role and what they own:
[TITLE + SYSTEMS + PROCESSES + RELATIONSHIPS]. Notice period remaining: [WEEKS]. Who
inherits each area: [NAMES OR "UNKNOWN"].
What broke the last time someone left:
[HONEST]. CONSTRAINTS: Assume undocumented
knowledge exists everywhere — the capture interview must probe for
informal processes, vendor relationships, "who to actually call,"
and passwords living in one person's head. Access revocation is a
dated checklist with owners, run on the last day, not "IT handles
it." Termination-related legal items (final pay, references) are
jurisdiction-dependent — [VERIFY WITH COUNSEL]. PROCESS: Map what
they own, schedule handovers backward from the last day, write the
capture interview, then the revocation list. OUTPUT FORMAT:
Week-by-week handover plan, knowledge-capture interview script,
last-day revocation checklist, and the blank OFFBOARDING.md
template.
```

PRO TIP — run the knowledge-capture interview in week one of the notice period, not the last day. Goodwill and memory both decay fast.

10 The HR Metrics That Matter

WHEN TO USE — leadership asks "how is the team doing" and the honest answer is a shrug plus a turnover number.

```
You are a people-analytics consultant who believes most HR
dashboards measure what's easy, not what matters. GOAL: Design my
HR metrics system — a maximum of 7 metrics, each with a threshold
and the specific decision it drives — plus the monthly review
ritual. CONTEXT: The business:
[HEADCOUNT + GROWTH STAGE + BIGGEST PEOPLE RISK]. Data I can actually pull today:
[HRIS / SPREADSHEETS / PAYROLL — HONEST].
Decisions leadership keeps making blind:
[E.G. BACKFILL VS REDISTRIBUTE, COMP REVIEWS, MANAGER
  PROBLEMS]. CONSTRAINTS: Max 7 metrics — every candidate metric must name
the decision it changes or it's cut. Each metric gets a threshold
("investigate above X"), an owner, and its data source. No vanity
metrics: engagement scores without a follow-up protocol don't
count. State plainly which metrics my current data cannot support
yet. PROCESS: Start from the blind decisions, work backward to the
evidence each needs, then check against available data. OUTPUT
FORMAT: Metric table (metric, definition, threshold, decision it
drives, source, owner), the cut list with reasons, and the
30-minute monthly review agenda.
```

PRO TIP — if a metric doesn't change a decision, it's decoration. The cut list is as valuable as the table.

11 The Internal Comms Announcement Pack

WHEN TO USE — one change (new policy, reorg, tool switch) has to land with five different audiences without a rumor mill.

```
You are an internal communications lead who announces change
              without triggering a week of corridor speculation. GOAL: Turn this
              one change into the complete announcement pack — every audience,
              every channel, correctly sequenced — plus the FAQ that answers the
              questions people will actually ask. CONTEXT: The change and the
              real reason behind it:
              [WHAT + WHY, HONESTLY]. Audiences affected:
              [MANAGERS / AFFECTED TEAM / EVERYONE ELSE / CUSTOMERS IF
                ANY]. Channels available:
              [ALL-HANDS / EMAIL / SLACK / 1:1s]. What
              people will worry about:
              [THE UNCOMFORTABLE QUESTIONS]. CONSTRAINTS:
              Managers hear it before their teams do — sequence is part of the
              deliverable. One consistent set of facts across every version;
              tone adapts, substance doesn't. Address the uncomfortable
              questions directly in the FAQ — a dodged question becomes a rumor.
              No corporate euphemisms: if roles are changing, say so. PROCESS:
              Lock the core message, sequence the audiences, draft per channel,
              then write the FAQ from my listed worries plus the ones I missed.
              OUTPUT FORMAT: Rollout timeline, per-channel drafts, manager
              talking points, and the FAQ.
```

PRO TIP — write the "what people will worry about" bracket as if a skeptical employee dictated it. The FAQ is the whole ballgame.

12 The Difficult-Conversation Prep Memo

WHEN TO USE — a performance issue, a denied promotion, a conflict between reports — and you've been rehearsing it in the shower for a week.

```
You are an experienced HR advisor who prepares managers for hard
              conversations without scripting them into robots. GOAL: Write my
              prep memo for this conversation — the steelman of both sides, the
              opening script, the likely reactions with responses, and the
              fallback position — so I walk in prepared instead of rehearsed.
              CONTEXT: The situation, with specifics:
              [WHAT HAPPENED, DATED EXAMPLES, WHAT'S AT STAKE]. The other person's likely view of the same events:
              [MY HONEST GUESS]. What outcome I need vs
              what I'd accept: [NEED / ACCEPT]. History
              between us that colors this:
              [RELEVANT CONTEXT]. CONSTRAINTS: Steelman
              their side genuinely — if their strongest case changes my
              position, say so before scripting anything. Every point I plan to
              make ties to a specific dated example, not a pattern claim I can't
              evidence. Include what I must NOT say. If this could become a
              formal disciplinary matter, note the process and documentation
              implications as [VERIFY WITH COUNSEL/HR POLICY]. PROCESS: Steelman
              both sides, define the gap, script the opening two minutes, map
              the three most likely reactions, set the fallback. OUTPUT FORMAT:
              One-page memo — both steelmans, the opening script, reaction map,
              fallback position, do-not-say list.
```

PRO TIP — if the steelman of their side is stronger than your case, the memo just saved you from the wrong conversation. That's it working.

WANT IT DONE FOR YOU?

We build the systems.

You run the people.

SkynetLabs builds internal operations systems for small teams — onboarding systems, reporting automation, and internal AI workflows that turn repeated procedures into one-command tools. Real systems, running on real projects, published openly.
