FOR RECRUITERS + JOB SEEKERS

12 Fable 5 Prompts That Beat the ATS.

Claude Fable 5 is the strongest model Anthropic has ever shipped — and these prompts run on any Claude model you already pay for. These 12 prompts cover both sides of the hiring table — six turn it into a **resume rewriter, interview coach, and negotiation partner** for candidates, and six turn it into a **sourcing engine, intake specialist, and submission writer** for recruiters. No keyword-stuffing tricks, no invented experience — just your real material, framed the way screeners actually read it.

WORKS ON ANY CLAUDE MODEL

Fable 5 is included on Max and Team Premium plans (up to 50% of your weekly limits). On Pro and Team Standard it runs on usage credits. Every prompt in this pack is model-agnostic — it works on whichever Claude model you have.

12	6+6	1
COPY-PASTE PROMPTS	JOB SEEKER + RECRUITER SPLIT	REUSABLE ASSET PER PROMPT

How to run these in 3 steps.

No technical setup. If you can paste a job description, you can run every prompt in this pack.

1

Open Claude and pick Fable 5

Go to `claude.ai` (or Claude Code if you use it) and select **Fable 5** in the model picker. On Max and Team Premium it is included, up to 50% of your weekly usage; on Pro it runs on usage credits. Any Claude model will run these prompts.

2

Paste the prompt, fill the [BRACKETS]

Copy a prompt from this pack exactly as written. Everything in `[UPPERCASE BRACKETS]` is yours to fill — the full job description, your real resume, the hiring manager's actual words. The more real detail you paste, the better the output. Fable 5 handles huge amounts of context, so do not summarize — paste the whole JD, the whole resume, the whole intake call notes.

3

Save the output as a template

Every prompt here produces something reusable — a resume tailoring system, an outreach sequence, an interview scorecard. Save each one. That is the point: you keep the asset long after any one model's pricing changes.

Pro habit: end every session with one more line.

Before you close the chat, type: "Turn what you just built into a fill-in-the-blanks template I can reuse for every future role." Fable 5 will package its own work. That template is yours forever.

01 The ATS Resume Tailor

When to use: every application worth more than a one-click apply — this replaces the generic resume with a JD-matched one in minutes.

```
You are a resume strategist who understands how applicant tracking systems parse resumes and how the recruiter behind the ATS actually skims them.

GOAL: Rewrite my resume for [JOB TITLE AT COMPANY] so it matches the language of the job description — and give me a reusable tailoring checklist for every future application.

CONTEXT: The full job description: [PASTE THE WHOLE JD]. My current resume: [PASTE IT COMPLETE]. Extra context the resume leaves out: [PROJECTS, TOOLS, NUMBERS YOU CAN PROVE].

CONSTRAINTS: Use only real experience I pasted — never invent skills, titles, dates, or results. Map JD keywords to my actual experience; where there is no honest match, list it as a gap instead of faking it. No keyword stuffing, no tables or graphics that break ATS parsing. Every bullet: action, scope, result.

PROCESS: Extract the JD's must-have terms, map each to my material, rewrite, then flag unmatched gaps.

OUTPUT FORMAT: Rewritten resume in plain text, keyword map table, honest-gap list, reusable checklist.
```

PRO TIP The honest-gap list is your interview prep — those are exactly the questions you will get asked.

02 The Cover Letter That Mirrors the JD

When to use: whenever a cover letter is requested or the role has under 50 applicants — the letter that proves you read the posting.

```
You are a hiring manager who has read thousands of cover letters and deletes the template ones in four seconds.

GOAL: Write my cover letter for [ROLE AT COMPANY] — one that mirrors the JD's own priorities back at it and connects each to something I have actually done.

CONTEXT: The job description: [PASTE IT]. My tailored resume: [PASTE FROM PROMPT 01]. Why I genuinely want this role: [HONEST — NOT "PASSIONATE ABOUT"]. Anything I know about the team or company: [RESEARCH, NEWS, PEOPLE].

CONSTRAINTS: Under 250 words. Only real experience I pasted — no invented achievements. Open with their problem, not my biography. Pick the JD's top 3 priorities and answer each with one proven example. Zero cliches: no "team player", "fast-paced environment", or "I am writing to apply".

PROCESS: Rank the JD's priorities, match my strongest proof to each, draft, then cut every sentence that could appear in anyone else's letter.

OUTPUT FORMAT: Final letter, plus the priority-to-proof map so I can redo this for any role.
```

PRO TIP The "could this appear in anyone else's letter" cut is the whole edit — run it twice.

03 The LinkedIn Profile Overhaul

When to use: once per job search — recruiters search LinkedIn before they read applications, and your profile is what they find.

```
You are a LinkedIn strategist who optimizes profiles for recruiter search, not vanity.

GOAL: Overhaul my LinkedIn profile — headline, About section, experience bullets, and skills order — so recruiters searching for [TARGET ROLE] find me and stay.

CONTEXT: My current profile, copied in full: [PASTE EVERY SECTION]. Three job descriptions for roles I want: [PASTE ALL THREE]. What I want to be known for: [ONE SENTENCE]. Constraints on what I can say publicly: [CURRENT EMPLOYER SENSITIVITIES].

CONSTRAINTS: Only real experience I pasted — no inflated titles, no invented metrics. Headline states role + specialty + proof, not "seeking opportunities". About section written in first person, under 150 words, opens with the problem I solve. Use the search terms that appear across all three JDs.

PROCESS: Extract the shared keywords from the three JDs, audit my profile against them, then rewrite each section.

OUTPUT FORMAT: Ready-to-paste text per section, plus a keyword list ranked by how often the JDs use it.
```

PRO TIP Paste three JDs, not one — the overlap between them is the real search language for your role.

04 The Interview-Prep Dossier

When to use: the day the interview is booked — walk in knowing more about the company's situation than the other candidates combined.

```
You are an interview coach who prepares candidates the way analysts prepare for earnings calls: from source material, not guesses.

GOAL: Build my interview dossier for [ROLE AT COMPANY] — likely questions, my strongest answers, smart questions to ask back, and the one-page brief I reread outside the door.

CONTEXT: The job description: [PASTE IT]. Company material I collected: [PASTE: ABOUT PAGE, RECENT NEWS, PRODUCT PAGES, REVIEWS, THE INTERVIEWER'S LINKEDIN]. My resume: [PASTE IT]. Interview format: [WHO, HOW LONG, WHAT STAGE].

CONSTRAINTS: Work only from the material I pasted — mark anything else [VERIFY] so I can check it before quoting it in the room. Answers built on my real experience only. Questions to ask must show I understood their situation, not "what does success look like".

PROCESS: Diagnose why this role is open, predict the 10 most likely questions, draft my answers, then build the one-pager.

OUTPUT FORMAT: Dossier with question/answer pairs, 5 questions to ask them, one-page brief.
```

PRO TIP The "why is this role open" diagnosis changes how you answer everything — a growth hire and a backfill want different stories.

05 The Career Story Answer Bank

When to use: build once per search — every behavioral question ("tell me about a time...") answered from your real stories, ready before anyone asks.

```
You are a behavioral interview coach who turns messy career memories into structured, true stories.

GOAL: Build my behavioral answer bank — my best real stories mapped to the questions they answer, each told in situation-action-result shape, in my voice.

CONTEXT: Raw stories from my career, told badly: [BRAIN-DUMP 6-10 MOMENTS: A CONFLICT, A FAILURE, A WIN, A DEADLINE, A DECISION, A TIME YOU CHANGED YOUR MIND]. The role I am interviewing for: [PASTE THE JD]. How I actually talk: [PASTE AN EMAIL OR MESSAGE YOU WROTE].

CONSTRAINTS: Only the events I described — tighten the telling, never improve the facts. Each story under 90 seconds spoken. Every result stated honestly, including the failure story, told without spin — interviewers trust candidates who own outcomes. Flag which stories are weak so I brainstorm replacements.

PROCESS: Sort my stories against the competencies in the JD, structure each, then map one story to multiple question phrasings.

OUTPUT FORMAT: Table: question type, my story, 90-second telling, one-line version.
```

PRO TIP One good story answers five differently-worded questions — the map matters more than the count.

06 The Salary Negotiation Script

When to use: the moment an offer lands (or a range comes up early) — the conversation most candidates improvise and most regret.

```
You are a salary negotiation coach who prepares candidates to negotiate calmly, factually, and without bluffing.

GOAL: Script my negotiation for the [ROLE] offer — my counter, the exact words to deliver it, and responses to the likely pushbacks.

CONTEXT: The offer: [BASE / BONUS / EQUITY / BENEFITS]. Market data I collected: [PASTE RANGES FROM POSTINGS AND SALARY SITES + SOURCES]. My leverage, honestly: [OTHER PROCESSES, CURRENT SALARY, HOW MUCH I WANT THIS]. What matters beyond base: [REMOTE, TITLE, START DATE, REVIEW TIMING].

CONSTRAINTS: No bluffing — never claim a competing offer I do not have. Anchor to the market data I pasted, mark unverified numbers [VERIFY]. Every line stays warm and collaborative; the goal is the job AND the number. Include the graceful accept line if they cannot move.

PROCESS: Set my target, ask, and walk-away numbers, script the counter, then rehearse the three hardest pushbacks.

OUTPUT FORMAT: Numbers summary, spoken script, pushback/response table, follow-up email.
```

PRO TIP Rehearse the script out loud twice — negotiations are won by whoever is least surprised.

07 The Boolean Search String Builder

When to use: the start of every sourcing sprint — turn a JD into search strings for LinkedIn, GitHub, and Google in one pass.

```
You are a sourcing specialist who builds boolean search strings that surface hidden candidates, not the same 50 profiles everyone else InMails.

GOAL: Build my boolean search kit for [ROLE] — strings for LinkedIn, Google x-ray, and [GITHUB / DRIBBBLE / NICHE PLATFORM], from broad to laser-narrow.

CONTEXT: The job description: [PASTE IT]. Titles this person might actually hold: [VARIANTS YOU HAVE SEEN]. Skills that are non-negotiable vs nice-to-have: [SPLIT THEM]. Companies whose alumni fit: [LIST]. Locations or remote rules: [DETAILS].

CONSTRAINTS: Include title synonyms and adjacent titles the JD forgot. Show the logic of each string in plain English so I can edit it myself. Build exclusion terms for the false positives this role attracts. Flag which platform each string is tuned for — syntax differs.

PROCESS: Extract must-have terms, expand synonyms, then build three tiers: broad, focused, needle.

OUTPUT FORMAT: Table per platform: tier, string ready to paste, what it targets, expected volume (high/medium/low).
```

PRO TIP Run the broad string first and paste 5 good profiles back in — Fable will reverse-engineer what they share and tighten the narrow string.

08 The JD Rewrite That Attracts

When to use: before any role goes live — most JDs are legal documents that filter; this one sells the role to the person you actually want.

```
You are an employer-brand copywriter who rewrites job descriptions so the right candidates apply and the wrong ones self-select out.

GOAL: Rewrite the job description for [ROLE] to attract [THE CANDIDATE PROFILE YOU WANT] — clear, honest, and specific enough that a great candidate can picture the job.

CONTEXT: The current JD: [PASTE IT]. What the hiring manager said this person will really do: [FROM YOUR INTAKE NOTES]. Salary range and whether I can publish it: [DETAILS]. What is genuinely good about this team, with evidence: [REAL SPECIFICS, NOT PERKS].

CONSTRAINTS: Only claims I can back — no "competitive salary" if we will not publish the range, no "fast-growing" without the fact behind it. Cut requirements that are wishes; keep the 5 that predict success. First 3 lines must tell the candidate what they will build/own, not the company history. Write at an 8th-grade reading level.

PROCESS: Separate real requirements from wishlist, lead with the work itself, then add one honest line about what is hard about this job.

OUTPUT FORMAT: Rewritten JD, a requirements cut-list with reasons, and a 2-line version for social posts.
```

PRO TIP The "what is hard about this job" line doubles as a screen — candidates who mention it in the interview actually read the posting.

09 The Candidate Outreach Sequence

When to use: after sourcing — the 4-touch sequence for passive candidates who ignore every "exciting opportunity" message in their inbox.

```
You are a recruiting outreach specialist writing to passive candidates who get 20 InMails a week and answer almost none.

GOAL: Write my 4-touch outreach sequence for [ROLE] — first message, two follow-ups, and a graceful close — personalized from what each candidate has publicly shared.

CONTEXT: The role in two honest lines: [WHAT THEY WILL OWN + RANGE IF SHARABLE]. A sample target profile: [PASTE ONE REAL PROFILE'S PUBLIC INFO]. Why this role beats their current one, honestly: [THE REAL PITCH — OR ADMIT IT IS LATERAL]. My past messages that got replies: [PASTE 1-2 IF YOU HAVE THEM].

CONSTRAINTS: First message under 90 words. Reference one specific thing from their profile in sentence one — their project, not their job title. No "exciting opportunity", "rockstar", "perfect fit", or fake familiarity. The ask is a 15-minute call, not an application. Follow-ups add new information, never "just bumping this".

PROCESS: Find the hook in the sample profile, write touch 1, then vary angle per follow-up: role, team, timing.

OUTPUT FORMAT: 4 messages with send-day spacing, plus a personalization checklist for scaling this honestly.
```

PRO TIP Sentence one earns sentence two — if it could be sent to anyone, rewrite it before anything else.

10 The Hiring Manager Intake Kit

When to use: before opening any search — the 30-minute intake call that prevents three weeks of sourcing the wrong person.

```
You are a senior recruiter who runs intake calls that surface what the hiring manager actually needs — which is rarely what the first draft of the JD says.

GOAL: Build my intake call kit for the [ROLE] search: the question set, the trade-off forcing questions, and the search agreement summary I send after the call.

CONTEXT: What I know so far: [DRAFT JD OR THE MANAGER'S FIRST EMAIL]. The hiring manager: [FIRST-TIME OR EXPERIENCED, PAST HIRING BEHAVIOR YOU HAVE SEEN]. Why the role is open: [BACKFILL / GROWTH / UNKNOWN]. Budget and timeline reality: [WHAT YOU KNOW].

CONSTRAINTS: Questions must force trade-offs — "if you can only have 3 of these 6 requirements, which 3" — not collect a wishlist. Include the questions that expose an unfillable role early (budget vs market, title vs scope). The summary email restates decisions, not discussion, and names what I will deliver by when.

PROCESS: Order questions from role purpose, to success at 12 months, to must/nice split, to process and decision rights.

OUTPUT FORMAT: Timed 30-minute agenda, question bank with why-this-matters notes, summary email template.
```

PRO TIP Ask "who was the best person you ever had in this role, and why" — the answer rewrites the JD every time.

11 The Candidate Submission Write-Up

When to use: every submittal — the write-up that makes the hiring manager open the resume instead of parking it for "later".

```
You are a recruiter who writes candidate submissions the way an analyst writes an investment memo: claim, evidence, risks, recommendation.

GOAL: Write my submission for [CANDIDATE NAME/INITIALS] for the [ROLE] search — a summary the hiring manager can read in 60 seconds and act on.

CONTEXT: The candidate's resume: [PASTE IT]. My screen notes: [WHAT THEY SAID ABOUT MOTIVATION, COMP, NOTICE PERIOD, CONCERNS]. What the hiring manager said they need (from intake): [THE TOP 3 REQUIREMENTS]. Comp expectations vs budget: [BOTH NUMBERS].

CONSTRAINTS: Only facts from the resume and my notes — never inflate the candidate or paper over gaps. Lead with the match to the top 3 requirements, evidence per claim. Include a "watch-outs" section — one honest risk builds more trust than ten superlatives. Keep candidate PII limited to what our process allows.

PROCESS: Map candidate evidence to the intake requirements, state the gaps plainly, then write the 60-second version on top.

OUTPUT FORMAT: 60-second summary, requirement-by-requirement match table, watch-outs, logistics line (comp, notice, timeline).
```

PRO TIP Save the structure as your permanent submittal template — consistency is what teaches hiring managers to trust your write-ups.

Both-sides habit: reuse across the table.

Recruiters: run prompts 01 and 04 once as a candidate would — you will screen resumes and prep candidates better for having seen the other side. Job seekers: run prompt 10 before your next interview and you will understand exactly what the recruiter promised the hiring manager about you.

12 The Interview Scorecard Builder

When to use: before the first interview of any search — so five interviewers stop measuring five different things.

```
You are a structured-hiring specialist who designs interview scorecards that reduce gut-feel bias and make debriefs about evidence.

GOAL: Build the interview kit for [ROLE]: a competency scorecard, questions mapped to each competency, and a 1-5 rating rubric with anchored examples per level.

CONTEXT: The JD and intake notes: [PASTE BOTH]. The interview loop: [WHO INTERVIEWS, IN WHAT ORDER, HOW LONG]. Where past hires for this team failed or thrived: [HONEST PATTERNS]. Legal/HR rules I must respect: [YOUR COMPANY/REGION].

CONSTRAINTS: Maximum 6 competencies — more means nobody measures anything. Every question ties to one competency and asks for a real past example, not a hypothetical. Rubric anchors describe observable evidence ("gave a specific example with their own role clear"), not adjectives. Flag any question that risks bias or legal trouble. Assign competencies across the loop so no two interviewers duplicate.

PROCESS: Derive competencies from the JD and failure patterns, write questions, anchor the rubric, then split coverage across interviewers.

OUTPUT FORMAT: Scorecard table, question bank per competency, rubric with level anchors, loop coverage map.
```

PRO TIP Send the scorecard to interviewers BEFORE the debrief — scores written after group discussion are just consensus with extra steps.

Want it done for you?

SkynetLabs builds AI systems for businesses that refuse to be average — automation that runs your follow-up, websites that convert, and content engines that post while you work. If you would rather fill roles than run prompts, that is literally what we are for.
